

ProGrade™

Paint Mask

ProGrade™ Paint Mask

Now One Vinyl Paint Mask Works

For Either Sign Shop Or Body Shop Applications

ProGrade™ vinyl paint mask is a specially-designed, removable film, used in making computer-cut stencils for painted graphics. Since we have no control over how our paint mask will be used, we designed it to the highest industry standards – "professional grade". R Tape's new, **ProGrade™** paint mask is engineered for either sign shop or body shop applications, and can be used with either sign enamels or automotive urethane paints.

Features:

- Available in either white or yellow, **ProGrade™** polymeric vinyl paint masks are preferred by professional paint shops. **ProGrade™** is easy to cut and weed, even when producing paint mask stencils with fine detail.
- **ProGrade™** paint mask features a user-friendly adhesive system, which is easy to transfer from the release liner, easy to apply, and easy to remove.
- **ProGrade™** paint mask removes cleanly from most factory paint surfaces without leaving any adhesive residue or other surface contamination.

- **ProGrade™** paint mask also withstands bake cycles up to +200°F (94°C).

ProGrade™ paint mask is available in the following sizes: 15" x 50 yds. (punched); 24" x 50 yd. rolls (unpunched); 30" x 50 yd. rolls (punched); 30" x 50 yd. rolls (unpunched); 30" x 250 yd. rolls (punched); 48" x 50 yd. rolls (unpunched); 48" x 250 yd. rolls (unpunched); and 60" x 250 yd. rolls (unpunched).

As a complementary product to the ProGrade™ paint mask, R Tape has developed its 4700LT RLA® Conform® Application Tapes. The medium-low tack, latex adhesive provides for easy removal from the paint mask stencil following the transfer of the graphics, without pulling off the vinyl mask from the substrate.
